We have opened a case with Autodesk Support and they have acknowledged that it is a defect in the application. They mentioned the Windows 10 upgrade as a factor for the defect. Is there any way I can obtain the error report or a log file from the app to understand what the issue is. A: I could reproduce the same problem as you did and I do know what the error is. We have not yet verified it. However, we could reproduce the crash by doing the following. Open Windows Explorer, navigate to the directory you have Autodesk AutoCAD 2014 installed, and open the Application Support folder (by default on Windows 10 this would be C:\ProgramData\Autodesk\AutoCAD 2014\Application Support). Open Autodesk.ini in Notepad and delete the line that is read as follows: Software\Autodesk\AutoCAD\2016\Layers = C:\ProgramData\Autodesk\AutoCAD 2016\Layers. Relaunch Autodesk AutoCAD 2014 and it should work. The reason why the app is crashing is probably related to changes in the current AutoCAD application. We have already submitted a bug report for this issue and the hope is that Autodesk will fix it in the next release.

Locus of control, attribution, and patient compliance. This study assessed the relationships among locus of control, attribution, and patient compliance. It was expected that patients with an internal locus of control would attribute their illness to external causes, and that patients with an external locus of control would attribute their illness to internal causes. This hypothesis was tested by having groups of patients rate the causes of their illness on an attribution scale. It was also expected that compliance would decrease when attributions are made to external causes. This hypothesis was tested by having patients read a short statement followed by five questions which asked them to rate their compliance. It was found that patients with an internal locus of control rated the causes of their illness as external, whereas patients with an external locus of control rated their illness as internal. Compliance was found to be inversely related to the number of causes attributed to an external cause.

Matthew Broderick (born July 8, 1962) is an American actor, best known for his roles in the films Ferris Bueller's Day Off (1986), The Princess Bride (1987), The Freshman 82157476af
